

Sources of Native Forest Nursery Seedlings

2006-07

Helping to meet the changing needs of family and non-industrial private forestland owners.

**Were you aware that some
forestation projects may qualify for
the Oregon 50% Tax Credit
to offset some of the costs of site preparation,
seedlings, tree planting, and weed control?**

Individuals undertaking such projects can get more information about the 50% Tax Credit from their local Oregon Department of Forestry Stewardship Forester or http://www.oregon.gov/ODF/PRIVATE_FORESTS/taxes.shtml#Tax_Credit.

Sources of Native Forest Nursery Seedlings

a service provided by the Oregon Department of Forestry

To help meet the changing needs of family and non-industrial private forestland (NIPF) owners actively engaged in:

*Afforestation,
Reforestation,
Forest Management,
Tax Incentives,
Timber Production,
Riparian Management,
Forest Pest Management,
Watershed Enhancement,
Fish and Wildlife Habitat Improvement,
Marketing of Forestry Carbon Offsets, etc.,*

the Oregon Department of Forestry (ODF) has compiled the *Sources of Native Forest Nursery Seedlings* catalog.

Published annually, the catalog helps landowners locate suitable tree stock to meet their unique and individual resource objectives.

This is just one of several valuable services that ODF provides to family and private non-industrial forestland owners. Other services include providing information and advice, technical assistance, and financial incentive guidance on:

Forest Health Issues,
Silvicultural Practices, &
Land Stewardship Activities.

Nurseries included in the catalog may have additional stock available.

Please contact individual nurseries for stock information, current seedling inventories and ordering procedures. You can learn more about each nursery by visiting their web site.

ODF cannot guarantee the accuracy or availability of the seedling stock listed in the catalog--nursery stock availability may change over time.

To ensure you will have seedlings available for future projects, you may contract to have seedlings grown at most nurseries. Nurseries are now developing sowing plans for future planting seasons.

This catalog can be viewed and a copy printed from
http://www.oregon.gov/ODF/PRIVATE_FORESTS/private_forests.shtml

Definition of Terms

Species: The common types of native forest tree species in Oregon.

Seed Zone: The area where seed was collected and can be safely outplanted. Seed zone numbers correspond to the numbers shown on the maps on pages 10-12. Because Oregon recently changed its seed zone classification system, two zoning maps are provided--reflecting the old and new classifications. Genetic research shows that the wider seed movement generally allowed by the new seed zones poses little risk during reforestation.

Elevation Band: The elevation where seed was collected and can be safely outplanted. Some nurseries present this as a range. Others present a single elevation value, which represents the top of the elevation range where seed was collected in 500-foot increments. For example, if the elevation is noted as 1,500', the seed came from 1,000-1,500 feet in the seed zone listed. The importance of elevation in planting varies among species and seed zones. The new seed zone maps include elevation information and can serve as a guide.

Stock Type: There are two basic types of planting stock: bareroot and container grown seedlings. Bareroot seedlings are sown and grown in nursery beds, lifted, and then sold without soil on the roots. Container grown or "plug" seedlings are normally grown in a greenhouse. The container's cavities are filled with growing medium and the seed is sown on top. Nurseries extract plug seedlings from containers before shipment. There are many sizes and shapes of containers. Some nurseries also offer Plug +1 seedlings, which are grown in a greenhouse for 9-12 months and then transplanted into a bareroot nursery for one year. For a discussion on the pros and cons of various stock types, seedling sizes, and containers see the "*Guide to Reforestation in Western Oregon*" by Robin Rose and Paul Morgan. This guide is also available from your local Stewardship Forester or OSU Extension Agent and online at http://www.cof.orst.edu/cof/pub/home/structur/pubs_view.php.

Age: Bareroot seedlings are typically classified by the number of years grown in the nursery or transplant bed. The first digit in "1+0", "2+0", "1+1", etc., represents the number of seasons a seedling was grown in the nursery seedbed. The second digit is the number of seasons the seedling was grown in a transplant bed. "Plug +1" indicates a seedling was grown for one season in a container, plus one season in a transplant bed.

Genetically Improved Seedlings: These seedlings are grown from seed produced in seed orchards. The seed orchards contain trees that have been selected through extensive field trials to be fast growing or have other desirable traits (e.g., good form). The cost of genetically improved seedlings is often slightly higher than that of seedlings grown from wild or "woods-run" seed. The improved growth of the genetically improved seedlings may offset these costs.

Disease Resistant: Disease resistant western white pine, sugar pine, and Port Orford cedar seedlings are available. More information is available on the web page of the USDA Forest Service Dorena Genetic Resource Center at <http://www.fs.fed.us/r6/dorena>.

Price: The cost per seedling (i.e., \$.30 each); cost for 100 seedlings (i.e., \$39/100); or cost for 1,000 seedlings (i.e., \$300/M).

Sources of Native Forest Nursery Seedlings

2006-07

Please Note: This is a list of forest tree species native to Oregon. Seedlings are listed alphabetically by species. ODF does not guarantee the accuracy or the availability of the seedlings listed. Several of the nurseries listed also offer ornamental tree and shrub species as well as native shrub species. Please contact the nursery directly with any question related to seed zones, species, prices, or other available stock not shown on this list.
